

SKYLINE PARTNERS - PROJECTS

“.....I have nothing but praise for the support that we received from Keith DeBrine and Skyline Partners in the accomplishment of this successful project. I truly question how we would have completed this project in such a manner without Skyline Partner's involvement.....”
Ron Mancini,
Chairman, Buildings & Grounds Committee
Holy Trinity Church

PROJECT INFORMATION

Architect: Stoecker Northway

Contractor: SC Builders

Size: 11,000 s.f.

Project Costs: \$4,100,000

ANGUS HALL, MENLO PARK, CA

The Angus Hall Project consisted of a complete demo of an existing structure and construction of a support building for Holy Trinity Church. Working for the church's architectural committee to control “scope creep” and meet all of the parishioner's needs proved to make this a challenging project. Other project successes included obtaining a new use permit from the City of Menlo Park, complete new PG&E design to accommodate increased electric and gas loads and preserving several heritage trees that were on the site.

Skyline Partners, Inc. was obtained as the project manager, being entirely responsible for budget and schedule. The vendors Keith DeBrine managed included; architect, general contractor, audio visual, data cabling, signage, security, furniture, asbestos abatement contractor, asbestos hygienist, and arborist.

A complete state approved children's play yard and structure were part of this project for the church's pre-school who served as the main tenant of the building.
